Introduction	xi
CHAPTER 1	
Generalities	1
Wandering and nonwandering points, nonwandering set. The ω -limit set, $\omega_f(x)$, the α -limit set, $\alpha_f(x)$. The limit set, $L(f)$. Pseudo-orbits. Chain recurrence and $R(f)$. The C^r topology	
Commentary	
References	
CHAPTER 2	
Filtrations	8
A filtration adapted to a homeomorphism. The invariant set of a filtration. The stable and unstable sets, W^s and W^u . Filtration orderings	
Commentary	
References	
CHAPTER 3	
Sequences of Filtrations	13
Refining a filtration. Sequence of filtrations. Fine filtrations. Fine sequences of filtrations. Function decreasing along orbits. Ω -explosions.	
Lyapunov functions	
Commentary	
References	
CHAPTER 4	
Hyperbolic Sets	20
Hyperbolic invariant sets. Adapted metrics. Hyperbolic fixed points. Anosov diffeomorphisms. Smale's horseshoe. Shifts. The solenoid	
Commentary	
References	

CHAPTER 5	
Stable Manifolds	33
Hyperbolic automorphisms. Lipschitz maps. The local unstable manifold theorem for a point. The graph transform. Differentiability. Adapted metrics on vector bundles. The C^r section theorem. Hölder bundles. The global unstable manifold theorem for a point	
Appendix I. The Local Lipschitz Inverse Function Theorem	49
Appendix II. Irwin's Proof of the Stable Manifold Theorem	51
Appendix III. Center and Strong Stable Manifolds	61
Commentary	
References	
CHAPTER 6	
Stable Manifolds for Hyperbolic Sets	71
Stable and unstable discs. The spaces of bounded and continuous sections of a bundle. The exponential map. The local and global unstable manifolds	
Appendix IV. Center and Strong Stable Manifolds for Invariant Sets	79
Commentary	
References	
CHAPTER 7	
More Consequences of Hyperbolicity	83
Transversality. Expansivity. The invariance of hyperbolicity under perturbation. The fixed point of a perturbation of a hyperbolic automorphism. Theorem 7.8. The Grobman–Hartman Linearization Theorem	
Commentary	
References	
CHAPTER 8	
Stability	100
Semiconjugacy, topological conjugacy. Structural stability, Ω -stability. Axiom A. Local product structure. Topological transitivity and topological mixing. Spectral decomposition. Cycles in the spectral decomposition. The shadowing lemma. The Ω -stability theorem. The central problem	
Commentary	
References	
CHAPTER 9	
A Potpourri of Stability Results	117
Axiom A. Strong transversality. Morse–Smale diffeomorphisms. The stability conjecture	
Commentary	
References	

CHAPTER 10

Markov Partitions 122

Symbolic dynamics. Subshift of finite type. Isolated periodic points. The zeta function. Rectangles and proper rectangles. Markov partitions.

Unstable bands. The finiteness of the coding by a Markov partition.

The rationality of the zeta function

Commentary
